

MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report – April 14th to 20th, 2024

1

MONITORING and WEATHER

Accumulation of water: total of 11,9 mm

Date of precipitation: April 14th and 15th, April 18th to 20th

Is there presence of larvae on the field?: Yes No

Note: Late hatching of spring larvae is underway, since there was some rain in the past weeks. Larval development is slower due to cold weather. The team will continue their sites inspections this week.

TREATMENT

Was there a treatment?: Yes No

Type of treatment: Ground Aerial

Date of treatment: The ground treatment has begun on April 13th in several areas of Kanata and is ongoing. Aerial treatment was performed by helicopters.

POST TREATMENT

Was there a post-treatment? : Yes No

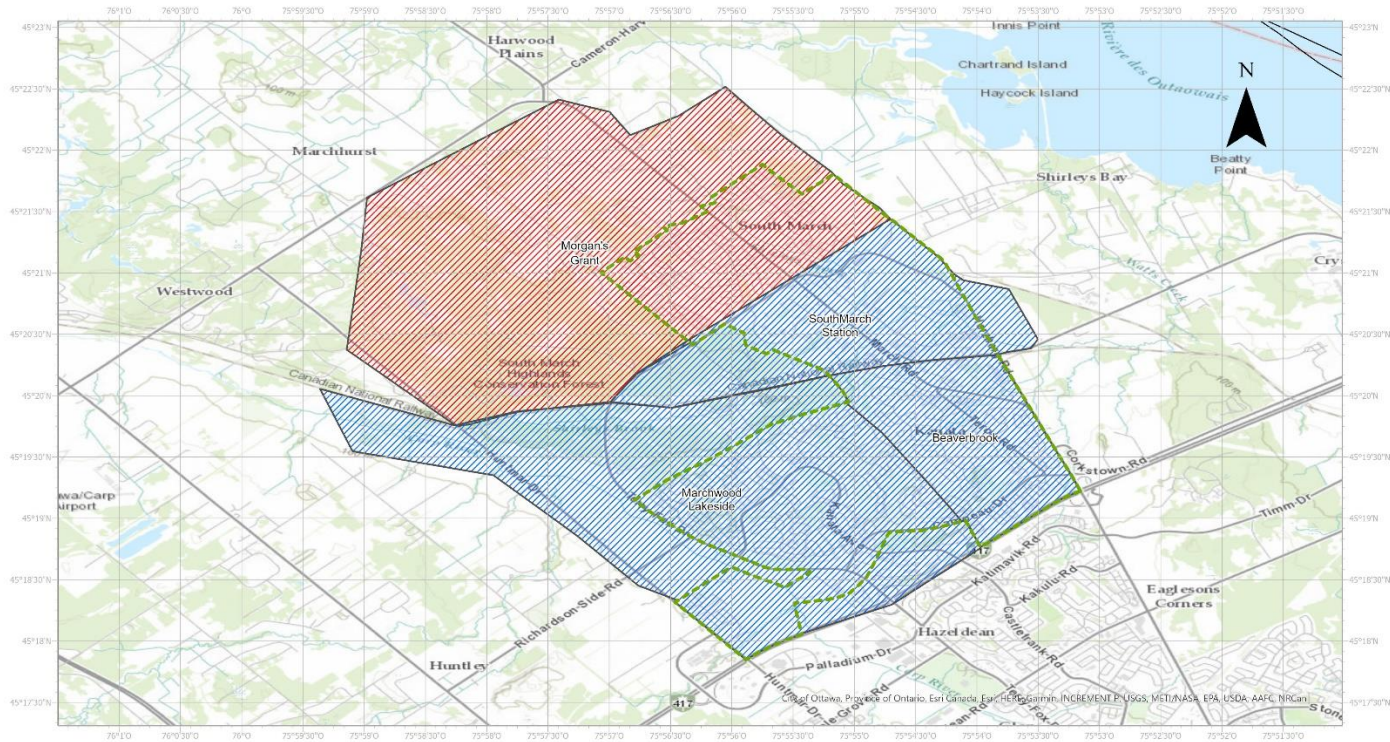

Larval Mortality: High mortality

Is there another treatment to be done?: Yes No

Note: Spring treatment is still underway

SWEEP TEST

Were there sweep tests this week? : Yes No

Note: Sweep tests will begin after the first mosquito adults begin to emerge.

3

TRAPPING

Was there trapping this week? : Yes No

Note: Trapping will begin after the first mosquito adults begin to emerge.

CITIZEN REQUESTS

Were there any key requests from citizen or from city this week? Yes No

Two citizens called us or emailed to mention a lot of nuisances last year and making sure to have treatment this year. We have taken note of their contact details to carry out the appropriate treatments this year.

Forecast for next week (April 21st to April 27th):

Larval development is still ongoing and spring treatment will continue. Some precipitation expected, but it should not be severe enough to impact operations. Post-treatment will continue.

Possible treatment: Yes No

If yes:

Type of treatment: Ground Aerial

Date of planned: Ground treatment will be performed if necessary.
