MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report – August 10th to August 16th, 2025

MONITORING and WEATHER

Accumulation of water: 9.2 millimeters.

Date of precipitation: August 13th.

Is there presence of larvae on the field?: Yes ☐ No ☒

Note: The low rainfall persisted, causing larval habitats to remain stable in their dry state, with no changes noted since the previous week.

We confirmed the beginning of *Coquillettidia perturbans* larval hatching. We have already identified new larval habitats, which will be mapped for future seasons. It's important to remember that treatments for this particular species are scheduled only for the spring, as the larvae overwinter.

TREATMENT

Was there a treatment?: Yes ☐ No ☒

Type of treatment: Ground ☐ Aerial ☐

Date of treatment: N/A.
