MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report – August 17th to August 23rd, 2025

MONITORING and WEATHER

Accumulation of water: 4.1 millimeters.

Date of precipitation: August 17th, 19th and 20th.

Is there presence of larvae on the field?: Yes ☐ No ☒

Note: The low rainfall persisted, causing larval habitats to remain stable in their dry state, with no changes noted since the previous weeks.

Given the lack of significant rainfall, we focused our efforts on prospecting for the species *Coquillettidia perturbans*. Our team successfully identified and added several new breeding sites to our existing map.
