MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report – May 31st to June 6th, 2026

MONITORING and WEATHER

Accumulation of water: A total of 21,2 mm of rain was observed during this period.

Date of precipitation: June 6th.

Is there presence of larvae on the field?: Yes No

Note: Rainfall occurred on the final day covered by this report. Its impacts will be assessed in next week's report based on field observations. However, the rainfall is expected to have been sufficient to re-flood certain habitats, potentially allowing mosquito larvae to develop during the first days of the following week.

Water levels in the Carp River remained low during this period, although an increase is possible in the next few days. However, levels are not expected to reach the threshold required to flood nearby larval habitats.

TREATMENT

Was there a treatment?: Yes No

Type of treatment: Ground Aerial

Date of treatment:

Kanata nuisance mosquito control GDG 2026

POST TREATMENT

Was there a post-treatment? : Yes No

Is there another treatment to be done?: Yes No

Note:

SWEEP TEST

Were there sweep tests this week? : Yes No

Tests were conducted on June 4th.

TRAPPING

Was there trapping this week? : Yes No

Number of traps: 5

Locations:

- Ernest Smith Park
- Beaver Pond Park
- Farrar Rd.
- South March
- Richarson Ridge Nature Trail

Kanata nuisance mosquito control GDG 2026

CITIZEN REQUESTS

Were there any key requests from citizen or from city this week? Yes No

6

FORECAST

Forecast for next week (June 7th to June 13th):

Based on the significant rainfall recorded over the weekend, a high probability of larval hatching of summer mosquito species is expected this week.

Possible treatment: Yes No

If yes:

Type of treatment: Ground Aerial

Anticipated Schedule: Ground treatment operations are expected to start on Tuesday, June 9th. If needed, aerial treatments will follow later in the week.
