MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report – June 7th to June 13th, 2026

MONITORING and WEATHER

Accumulation of water: A total of 31,4 mm of rain was observed during this period.

Date of precipitation: June 6, 10, 11, and 13

Is there presence of larvae on the field?: Yes ☒ No ☐

Note: Overall, rainfall had limited impact on larval habitats in Kanata North, aside from those along the Carp River margins and a small section of Beaver Pond. However, two increases in river levels during the week triggered significant larval hatching in most habitats adjacent to the river.

TREATMENT

Was there a treatment?: Yes ☒ No ☐

Type of treatment: Ground ☐ Aerial ☒

Date of treatment: June 13th.

Note: The treatment map for this week is provided below

POST TREATMENT

Was there a post-treatment? : Yes ☐ No ☒

Is there another treatment to be done?: Yes ☒ No ☐

Note: Post-treatment operations will be carried out during the next reporting period. Additional treatments are also planned for next week, but these are not related to treatment efficacy.

SWEEP TEST

Were there sweep tests this week? : Yes ☒ No ☐

Tests were conducted on June 9th.

Time	Address - Protected area	Mosquito	Black flies	Other species	Unprotected area	Mosquito	Black flies	Other species	% Efficacy (Mosquito)

CITIZEN REQUESTS

Were there any key requests from citizen or from city this week? Yes ☐ No ☒

7

FORECAST

Forecast for next week (June 14th to June 20th):

Given the significant rainfall recorded over the weekend, a high probability of additional larval hatching is anticipated this week. Monitoring of the Carp River is ongoing, as further treatments are expected to be carried out in habitats adjacent to the river.

Possible treatment: Yes ☒ No ☐

If yes:

Type of treatment: Ground ☒ Aerial ☒

Anticipated Schedule: Ground treatment operations are expected to continue on Monday, June 15, and over the following days. Aerial treatments are expected to resume on June 16.
